Helping shape pediatric care to improve clinical outcomes

Incorporating new technology into your clinical practice can be challenging and time consuming. Our goal is to provide you with the knowledge and confidence to use the Carpediem™ system to treat your pediatric continuous renal replacement therapy (pCRRT) patients. As you utilize the Carpediem™ system in your critical care areas, we will be with you every step of the way.

We will work closely with you and your team to create a training plan that meets your specific requirements. Whether your team needs training on existing standards or you're revising current protocols — the Carpediem™ system training program delivery can be adapted to support your program needs.

We will help improve your pCRRT skills by addressing your specific needs through impactful, interactive programs and resources. Our clinical support specialists will partner with you throughout your Carpediem™ system education sessions — using their practical clinical experience to bring each lesson to life.

Evaluate the need. Design the program. Implement and support.

Analyze

Together we will assess your team's performance and identify any potential gaps. Our goal is to ensure that post-training, your team is well-positioned for optimal clinical performance and the best possible clinical outcomes.

Build

Training delivery is designed based on the assessment, as described above. The instructional strategy is based on each target audience and the clinical needs of the unit.

Deliver

Instruction is provided by clinical trainers who specialize in pediatric care. Their experience and expertise will support your team in the adoption of the Carpediem™ system.

Support

The Clinician Support Hotline is a benefit available only to Carpediem™ system customers. Our 24/7 hotline allows you to speak directly with experienced, knowledgeable pediatric nurses about your pCRRT concerns. Consider our clinical support staff as an extension of your team.

Our flexible course delivery options enable you to plan training around your schedule and available resources. Your team's needs can be addressed through our customizable training program, which address the knowledge, skills, and behaviors for success in providing pediatric dialysis.

The program includes:

- pCRRT high level review - delivered by our clinical support specialists
- Training curriculum categorized into three pCRRT user groups: beginner, intermediate, and advanced, with an additional option for a physician session
- Instructor-led didactic and simulated sessions using the Carpediem™ system
- Training can be delivered on-site or virtually, via live-stream, which provides the same interactive content as in-person classes
- Hands-on training on start-up, system basics, and troubleshooting, as well as in-depth, clinical pCRRT scenarios with the Carpediem™ system

Emergency care 24/7 from pCRRT experts

The Carpediem™ system support includes on-demand, around the clock access to experienced, registered nurses, with in-depth knowledge of pediatric CRRT.
